Profile and Bio

Final-year Computer Engineering student at UET Taxila with a strong focus on backend engineering, DevOps, system design, and AI applications. Experienced in building scalable REST APIs, real-time communication systems, and microservices architectures using Python, Django, Fast-API, Docker, Kafka, and AWS. Hands-on experience with CI/CD automation through GitHub Actions, cloud deployment. Currently learning LangChain and LangGraph to build next-generation AI agents and autonomous workflows.

Education

Bachelor of Engineering in Computer Engineering **Aug 2023 - Present**
University of Engineering and Technology Taxila, Pakistan
Currently in 7th Semester with updated CGPA of 3.35

Secondary & Higher Secondary Education **Apr 2017- Oct 2022**
Cadet College Choa Saiden Shah Chakwal, Pakistan
A+ Grade · Computing Club · Football Team · Debating Society · Appointment Holder

Selected Projects

Rivon: Agentic AI for lead qualification and quotation (Final Year Project) Project Link: https://app.tideover.site/

- **We are building a multi-tenant SaaS AI agent** that handles customer enquiries on WhatsApp, Messenger and web chat for UK and Ireland trade businesses. It will qualify each lead, extract the job requirements and check whether the job can be taken.
- **We are combining LLM reasoning with deterministic logic.** Claude (Haiku and Sonnet) will handle the conversation and requirement extraction, while all prices are computed in Python code. Every quote goes to the business owner for approval before it reaches the customer.
- **We are engineering a production-grade backend** with FastAPI, PostgreSQL, Celery and Redis. It has signed webhooks, idempotent messaging, tenant isolation, and EU hosting with EU AI Act and GDPR safeguards built in.

Rukhsat – Smart School Pickup & Queue Management System (June 2026)

- Built a real-time school dismissal queue and parent-verification platform on a shared FastAPI backend serving two Android apps and an admin web dashboard
- Designed REST and WebSocket APIs against an OpenAPI contract, enabling parallel mobile and web development across a 2-developer team
- Automated deployment to AWS EC2 with GitHub Actions CI/CD workflows on every push. Stack: Python, FastAPI, WebSockets, Next.js, React Native (Expo), AWS EC2, GitHub Actions

WhatsApp Affiliate Automation Platform (June 2026 – Present) Project Link: https://www.beastaffiliates.com/

- Built a WhatsApp bot that turns any forwarded product link into a per-user tagged affiliate link with click-tracked article pages
- Engineered a link-rewrite engine across 9 Amazon marketplaces and Walmart, resolving short links and JavaScript-rendered pages via a headless-render fallback
- Designed an audit-safe earnings ledger with commission rates, referral rewards, and automated report ingestion with duplicate detection
- Covered the core business logic with 200+ offline unit tests, isolated from network and transport layers
- Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, React, TypeScript, Vite, Node.js (Baileys), AWS EC2, Vercel, Nginx

Personalized LMS System – 1st Runner Up in AI Hackathon, May 2026 Project Link: https://atomcamp.duckdns.org/

- Built an adaptive learning platform that personalizes student paths in real time based on performance data
- Implemented dynamic quiz difficulty adjustment and instructor analytics dashboard. Stack: Python, FastAPI, React, OpenAI API, PostgreSQL

Built "talentgraph.ai", talent mapping in Global AI Hackathon, 2026 Project Link: https://skillpath.duckdns.org/

- Built a global skill-mapping platform that clusters talent by niche, location, and market trends
- Integrated AI-based job description parsing to match organizations with relevant talent pools. Stack: Python, Django, React, OpenAI API, PostgreSQL

Full Stack Health Platform for Luther Health LTD (Mar 2025 – Sep 2025) Project Link: https://luther.health/

- Developed a production-grade health management SaaS for a UK-based doctor with 15+ assessment funnels
- Reduced AI infrastructure costs with an n8n workflow automation layer on AWS. Stack: Python, Django, AWS EC2, n8n, OpenAI GPT-4, React, Stripe, PostgreSQL

Real-Time Asynchronous Chat App Using WebSockets with End-to-End Encryption (Jul 2025 – Sep 2025)
Project Link: https://github.com/Tehman700/Real-Time-Chat-App-2-Way-Communication-WebSockets

- Built a full-stack async chat application with E2E encryption, OTP verification, and offline message handling. Stack: Python, Django Channels, WebSockets, PostgreSQL, React

Potholes Complaint System (Winning Project) in OOP Course Exhibition (Oct 2024 – Dec 2024)

- Built an Android app using Azure Vision AI to verify pothole photo authenticity before filing complaints. Stack: Java, Spring Boot, Azure Vision AI, PostgreSQL

Work Experience

Backend Software Engineer **Aug 2025 – Present**
Fiverr

- Built and deployed production-grade REST APIs using Python, Django REST Framework, and PostgreSQL, successfully delivering projects for 5+ clients across multiple time zones
- Designing and operating a WhatsApp affiliate automation platform end to end — FastAPI services, a Node.js linked-device bot, and a React dashboard — covering link rewriting, click tracking, and an audit-safe earnings and payouts ledger
- Hardened the messaging tier for production with message dedupe, decryption-retry handling, and adaptive per-chat send pacing, and shipped it on serverless deploys with git-push CI/CD and managed PostgreSQL
- Implemented real-time features using Django Channels and WebSockets, enabling bi-directional communication across 3+ client applications
- Designed and maintained CI/CD pipelines on AWS EC2 with Nginx reverse proxy, cutting manual deployment effort by ~40% and improving release reliability
- Achieved Level 1 Seller status within 2 months, maintaining a 5-star rating across all delivered orders through consistent delivery and systematic debugging

Software Engineering Backend Intern **Jul 2025 – Sep 2025**
Inara Technologies, F11 Markaz, Islamabad, Pakistan

- Architected a full-stack REST API from scratch using Django REST Framework, implementing JWT authentication, role-based access control, and custom exception handling across 10+ modules
- Built a nested commenting system supporting likes, dislikes, and threaded replies with full CRUD operations across 5+ content modules
- Developed real-time two-way communication using WebSockets and Django Channels, enabling live user interaction between clients and server
- Configured GitHub Actions CI/CD pipelines integrated with AWS, automating build and release workflows and reducing manual deployment steps by ~50%

Skills

- **Languages:** Python, Java, JavaScript, Verilog, SQL
- **Frameworks:** Django REST, React, FastAPI, Node.js, Django Channels
- **Cloud & DevOps:** AWS EC2, S3, Nginx, GitHub Actions, Docker
- **Tools:** n8n, Postman, Git, WebSockets
- **Databases:** PostgreSQL, MongoDB

Competitions

1st Runner Up in AI Hackathon at Aurex'26, Bahria H11 · Winner, OOP Course Semester Project among 150 students · **Speed Programming Hackathon at Devsinc**

Certificates

- Claude Code 101
- Software Development with GitHub Copilot
- Postman API Fundamentals Student Expert
- API Testing Learning Path Certificate
- Machine Learning with Python
- Transformers in LLMs
